CASE STUDY 01 · CONFIDENTIAL CLIENT ENGAGEMENT

Category and go-to-market strategy for an AI governance platform

Advising the founders of an AI governance and risk-assessment platform on how enterprises would adopt it, who would buy it and how to build trust with them.

CLIENT SECTOR AI-powered governance and risk-assessment platform	MY ROLE Strategic adviser to the founders
WORKED WITH Executive team, institutional partners and investors	FOCUS Category, buyer and trust pathway

The situation

The platform was creating a new kind of product. Large organisations had no budget line for it yet, so the way a buyer first described it would decide which team owned it and which budget paid for it.

What I did

1. **Category memorandum**
   How this kind of product is adopted inside large organisations: which teams feel the problem first, and what speeds up or slows down a decision.
2. **Diagnostic and positioning**
   A staged diagnostic model and a positioning story for risk, compliance and institutional-investment buyers, starting from the problem the platform solves.
3. **Framework comparison**
   A comparison with established practice, including data protection law and AI risk categorisation, showing where the platform adds to existing frameworks.
4. **Trust pathway**
   A sequence of registrations, standards and partnerships, including universities and investor networks, to build credibility over time.

HOW I APPROACHED IT

I worked from how compliance and risk teams actually take on new controls, which is the experience I bring from building and governing my own AI ventures.

Similar work I take on

- Founders of governance, risk or assurance products defining a new category
- Teams selling to risk, compliance or investment functions
- Platforms planning which registrations and standards to pursue first

The client's name and working documents are withheld under confidentiality.
